## **DETAILED ACTION**

### ***Response to Amendment***

This office action is in response to amendment filed on 7/10/09. Of the previously presented claims 1, 2, and 4-29; no amendments have been made.

### ***Allowable Subject Matter***

1. Claims 1, 2, and 4-29 are allowed.
2. The following is an examiner's statement of reasons for allowance:

The invention of the present application pertains to a estimating the position of a mobile device. With respect to the claimed invention, independent claim 1 recites that the method of estimating the position of a mobile device comprises the steps of collecting location information, determining a first location estimate, determining a virtual base station estimate from the first estimate and direction of the serving base station, and providing a second location estimate from the first location estimate and virtual base station estimate which is the actual location of the mobile device. The novelty of the invention lies in the combination of all the steps performed in determining the second location estimate, mainly how the a virtual base station estimate is determined using the first location estimate and direction information of the serving base station and how the virtual base station is used along with the first location estimate to determine the second location estimate. These features are neither taught nor suggested by the prior art.

The closest prior art not on record is Watanabe et al. (US 6,950,661). Watanabe discloses a location calculation method for calculating, using propagation delay time of signals received from wireless transmitters, a location of a reception point of signals. Watanabe teaches that a wireless terminal is placed in a virtual location (column 13, lines 23-37) in order to test for erroneous measured signal values that are used in location determination of a mobile station and removing the erroneous measurement to improve the precision of the determination (column 16, lines 1-14; 40-46). However, the virtual position of Watanabe can not be interpreted as a "virtual base station estimate" as required by the claims of the present application because it is not used as an artificial or simulated base station.

Accordingly, independent claim 1 and independent claims 26-29 that recite similar subject matter are allowable for these reasons and the reasons set forth in Applicant's response filed on 7/10/09. Independent claims 18-23 recite a specific mathematical algorithm for determining the location of the mobile device which is also neither taught nor suggested by the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
